Enterprise Information Architecture Roadmap

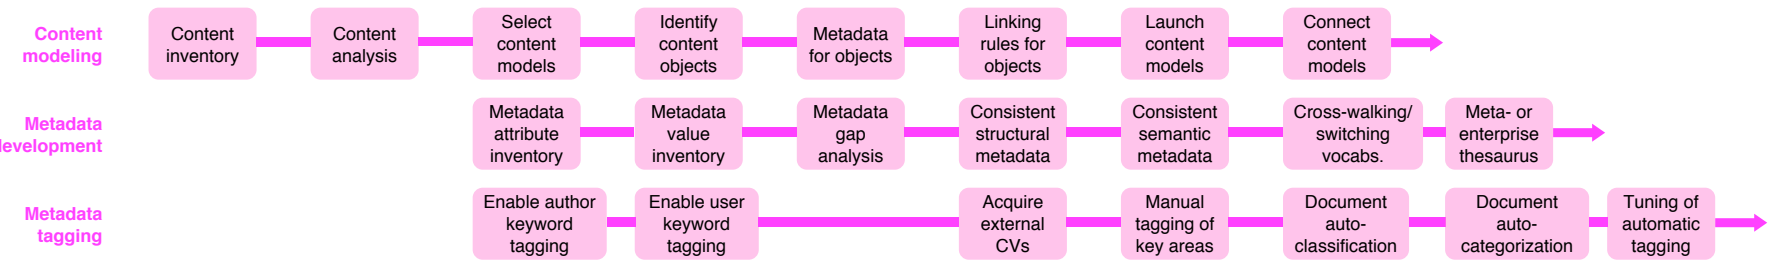

Louis Rosenfeld <http://www.louisrosenfeld.com>
 Version 2.0; May, 2005 *Your mileage will vary.*

Many enterprises have failed to integrate content from across departmental "silos" in ways that make sense to users. This Roadmap breaks down information architecture design into four major tracks, and plots concrete steps within each track over time with the goal of making information easier to find across silos. Use the Roadmap as a straw man to inform and shape your own enterprise IA strategy.
